

Dear customers,

Our firm can work out a basic project for you, in various alternatives, with approximate technical data for you, so that you can pre-prepare the building site, chimney or others. It is enough for us if you give us ground plan of the building site, or eventually plan of other floors. It is necessary to know approximately what is the required output of the heating body (can be computed for you by a designer or it can be done also by our firm) and one has to choose the appearance of the heating body, where you can find great spectrum of choices on our web site www.kachliar.sk and by clicking **STOVES**, **FIREPLACES**, **KITCHENERS** or also **OTHER FIRMS**, where you can find many other motives. The mentioned project can be sent to you from various views and either in classical format (i.e. pg), or even in 3D (skb, skp).
